

Defoaming agent

RP-6402

Features and advantages:

RP-6402 is used for foam control of coatings, emulsion polymerization processes and adhesives. It has shown excellent performance in acrylic, PVA and jelly gums. The defoamer can maintain good stability and compatibility in the system, has excellent defoamer and defoamer effect, and has the characteristics of small dosage, non-toxic, non-corrosive.

- 1, excellent system compatibility
- 2, fast defoaming and long-term suppression foam

Product specification:

appearance	Opaque liquid
Viscosity (25°C)	1000-3000mPa•s
Solid content	>95%

Application: emulsion polymerization, waterborne coatings, etc.

Application method:

It is added directly to the system requiring defoaming during the production process. For different production process systems, it is recommended to conduct small tests in advance to achieve the best defoaming effect and control the

appropriate dosage. It is recommended to test compatibility before use to achieve the best results.

Restrictions on Use: This product has not been tested or stated for medical or medicinal use.

Packaging: 25kg/ 50kg/ 200kg plastic drum packaging or 1000kg IBC drum

Storage: Stored at room temperature (5°C-40°C), away from direct sunlight, warranty period of 6 months
